

Vulnerability Intelligence Watch

Identify my weaknesses before the attackers do

Vulnerability monitoring is at the heart of the activity of our CERT (Computer Emergency Response Team). Our experts daily identify flaws in our customers' equipment and networks. In the event of a **discovered vulnerability** impacting your information system, our experts can offer **appropriate countermeasures**.

Vulnerability Intelligence Watch is a vulnerability monitoring service offered by Orange Cyberdefense.

It allows you to be informed **in real time** of the vulnerabilities impacting your information system and the patches to be applied.

This monitoring service allows you to :

- Identify your vulnerabilities continuously
- Prioritize your scope of actions
- Implement the appropriate recommendations

Our experts identify and qualify the criticality of your vulnerabilities in **your context**. Our recommendations are provided as **vulnerabilities reports** that are available for consultation through a **dashboard**.

Your teams are notified of **vulnerability reports** according to the frequency, format and level of urgency defined.

This support from our experts allows you to focus your efforts on what is important to implement your preventive and corrective actions.

Few figures

16 000

security vulnerabilities were discovered in 2018.

80%

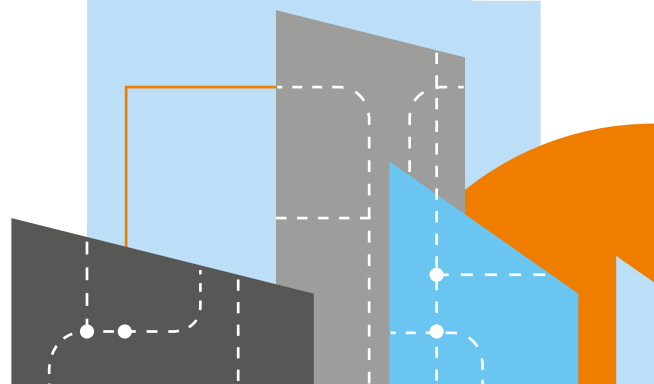

of attacks exploit a vulnerability in the information system.

25%

of the new vulnerabilities detected are patched within a month.

8 months later only 75% of vulnerabilities are patched.

Source : MITRE, Ponemon Institute

The process :

Key benefits

- **Flexible configuration** of users and perimeters.
- **A real-time tool** for monitoring your vulnerabilities and their remediation.
- **Contextualized information**, the criticality given is valued according to the risk and impact on your business.
- **Vulnerability notifications** are directly usable by your operational teams.

Key service features

- **Alerts** : you receive notifications via our mobile application, email and texts in the event of a pandemic or major campaigns.
- **Human Analysis** : our experts check the sources for each vulnerability that concerns you. A vulnerability report is provided by our experts including impact analyses.
- **A unified portal** with other CERT's services (anti cyber crime, cyber surveillance, etc).

Additional services

-  • Legal and regulatory monitoring
-  • Daily security press review
-  • Our CERT experts are available for any questions you may have concerning the monitoring of your surveillance perimeter
-  • Our mobile application to keep an eye on your vulnerabilities wherever you are
